Dynamic Website

A dynamic website is one that changes and updates content automatically without the need for manual updates by a developer. It can respond to user interactions and input. An example would be a social media site where you can post and see updates from other users.

- Ecommerce Website
- Social Media Website
- Entertainment Website)
- SaaS Website
- News Website
- Chat Application

Per page - ₹700 Only

Frontend Development

- React JS
- CSS
- Chakra UI
- Responsive Design

per page - ₹3999 Only ₹5000

Static Website

A static website is a simple type of website that does not use any server-side programming languages or databases. It is called "static" because the content on the website does not change unless it is manually updated by the website's creator. This type of website is suitable for small businesses, personal blogs, and portfolios.

SEO OPTIMIZATION

SEO (Search Engine Optimization) is the process of optimizing a website to improve its visibility and ranking on search engine results pages. This includes techniques such as keyword research, on-page optimization, and link building, among others. The goal of SEO is to increase website traffic and visibility, thus improving the chances of reaching a wider audience and driving more sales or conversions.

- Keyword research
- On-page optimization
- Content marketing
- Reporting and Analytics
- Website redesign and migration

Monthly charges - ₹5000 Only

MANAGEMENT OF WEBSITE POST DEPLOYMENT

Regularly updating the website's content, such as blog posts, product information, and other important information.

Keeping the website's software and plug-ins up-to-date to ensure that they are secure and compatible with the latest technology.

Monitoring the website for potential security threats, such as hacking attempts, and taking appropriate action to mitigate them.

Monitoring the website's performance, such as page load times, and taking action to improve it.

Tracking website traffic, visitor behavior, and conversion rates to gain insights into how the website is performing and make data-driven decisions to improve it.

Search engine optimization: Continuously monitoring and improving the website's visibility on search engine results pages.

(Free for first three Months post deployment)
